

Dear FCC:Please reject NAB's petition 04-160, I subscribe to satellite radio because it is a good value and offers a variety of stations not available on the radio. I like commercial free broadcasts and broadcasts that are not part of the inconsistently applied rules of indecency that are currently being applied to some radio hosts.

I travel 100% of the time and having traffic and weather available to me is crucial. XM radio is providing me with an important service and a quality product. XM should be able to determine the type of programming based on the needs of its subscribers not the NAB.

Please reject the petition and keep XM free from interference from the NAB.

Thank you,
Lorie Ballbach
